Rohan Jauhari

Ex-Product @McKinsey | Ex-AI Product @Avo Automation | 4 years
in Product | MS @Northeastern | Open for full-time Product positions
Boston, Massachusetts, United States

Summary

I build products that make complex things feel simple, whether that's automating workflows for enterprise teams, turning raw data into decisions, or shipping AI into the hands of everyday users. I have 4 years of product experience across a growth-stage SaaS startup and McKinsey. At McKinsey, I helped define the KPI framework for a product used by thousands and cut analyst work by 60% with an AI agent I helped ship from scratch. At the startup, I led product end to end, from discovery to roadmap to release, growing the customer base by 33% and cutting churn nearly in half. Outside of work, I've shipped Nourish Agent, a multi-agent AI nutritionist that adapts in real time to wearable data and your lifestyle, and SwiftHire, an AI tool built after surveying 100+ job seekers about what's broken in the application process. I'm finishing my MS in Information Systems at Northeastern, Boston (GPA 3.73, graduating August 2026) and actively exploring full-time roles in Product Management, Product Analytics, and Product Operations. If you're building something in AI, data, or SaaS and think there's a fit, I'd love to connect.

Experience

Northeastern University

Graduate Research Assistant

January 2026 - Present (5 months)

Boston, MA

McKinsey & Company

Product Analyst Intern

August 2025 - December 2025 (5 months)

Boston, MA

1. Built an end-to-end pipeline that queries the Snowflake data warehouse using SQL for 50+ feature-level KPIs and generates Power BI dashboards visualizing historical KPI trends, enabling business decisions

2. Tracked user engagement on the web app across 20+ features and created dashboards using Heap Analytics to monitor usage, providing insights, enabling product decisions

3. Redesigned data warehouse schemas used by a Snowflake AI agent, reducing incorrect or incomplete SQL queries by 40% and improving reliability of automated analytics

4. Automated Jira ticket creation triggered by status changes, eliminating manual ticket creation and reducing operational effort by ~80–90% per workflow.

Northeastern University

Senator at Graduate Student Government

October 2024 - August 2025 (11 months)

Boston, Massachusetts, United States

1.) Promoting the events, building partnerships and voicing out students' concerns at the university to build a strong identity of the graduate cohort.

2.) Collaborating with various offices (OMBUDS and CSDS) at Northeastern to create awareness about their programs in the student community.

3.) Participating in the club recognition process at the senate council and recruiting new senators.

Aspiring Product Managers Club @ Northeastern University

Product Manager

October 2024 - August 2025 (11 months)

Boston, Massachusetts, United States

1.) I analyzed survey responses from over 100 students to uncover the biggest challenges they face in finding housing. From this, I identified 10 key pain points that highlighted major inefficiencies in the student housing market.

2.) Digging deeper, I discovered gaps that existing platforms weren't addressing, which helped me prioritize 7 unique features designed to simplify the search process. To ensure we were solving the right problems effectively, I defined key success metrics—including a north star metric, counter metrics to track unintended consequences, and vanity metrics to avoid misleading insights.

3.) Through continuous usability testing and iterative improvements, I optimized the process, ultimately reducing the time students spend searching for housing and housemates by 75%.

Avo Automation

3 years 6 months

Senior Product Engineer

July 2023 - June 2024 (1 year)

Bengaluru, Karnataka, India

1.) Played a key role in driving business growth and product innovation, contributing to a 100% expansion in clientele by acquiring major clients, including JetBlue, Church & Dwight, Moody's, and Matchbook, through compelling demonstrations and strategic roadmapping of business use cases.

2.) As a Product Manager, I owned the end-to-end lifecycle of the AI Enablement roadmap, reducing manual effort by 75% and driving a significant increase in product adoption.

3.) Leveraging market analysis, I introduced a first-of-its-kind feature that addressed automation maintenance—one of the biggest user pain points—reducing effort by 90% and vastly improving user experience. This feature was later patented by the organization.

4.) Additionally, I represented the company at nationwide conferences and events, strengthening brand presence and marketing the product to a broader audience.

Product Engineer

August 2021 - July 2023 (2 years)

Bengaluru, Karnataka, India

1.) Reduced churn rate by 50% by collaborating closely with key clients (CNA, FIS, SONY, and Emerson) as well as strategic partners (Tech Mahindra, Coforge, and Expleo) to gather requirements and ensure seamless delivery, directly contributing to business growth.

2.) Additionally, I leveraged full-stack web technologies (MERN) to develop and enhance 50+ product features, increasing functionality and driving a 15% boost in revenue.

Product Development Intern

January 2021 - July 2021 (7 months)

Bengaluru, Karnataka, India

Resolved 30+ critical production defects, optimizing system performance and enhancing stability

Avo Automation

Product Development Intern

May 2020 - June 2020 (2 months)

Bengaluru, Karnataka, India

Developed and integrated a conversational assistant for a web app, enhancing user interactions

The LNM Institute of Information Technology

Member of the Alumni Association

January 2019 - December 2019 (1 year)

Jaipur, Rajasthan, India

Coordinated with the Placement Cell of the college to onboard recruiters who either employed our alumni or were alumni themselves. The role involved demonstrating the highlights of the then cohort to invite potential recruiters to participate in the 2019 placement season.

Education

Northeastern University

Master of Science - MS, Information Systems · (September 2024 - August 2026)

The LNM Institute of Information Technology

Bachelor of Technology, Computer Science · (July 2017 - May 2021)
